Note:

The scheduling program uses random numbers to select the teams that are to play. Your team will not be scheduled to play the same team more than once during the year. Of course due to "Position Nights", you could end up playing the same team more than once. The program attempts to optimize the distribution of your team playing both Tiburon and Pacific Springs. It is possible that number of times you play the front and back nines at Pacific Springs are not equal. Time constraints prevented the ability to program in this optimization.
